"Creative control machine point 4.0" HACCP Nilma System

www.layout.it

The new product traceability software.

patented
software

The intelligent software to direct the kitchen with a simple click, and much more.

Since 1st January 2005 a new law has become effective for the identification of food products along the food process "from producer to user", implementing art.18 of Com. Reg. CE 178/2002 relating to HACCP.

Our company has everything ready for it.

Our patented, innovative, multi-purpose software is at your disposal to improve your work processes.

If your kitchen also includes equipment of brands other than Nilma, that is not a problem.

Nilma has also made provisions for an integrated management.

As for all the equipment we have manufactured in over 50 years, safety and reliability go hand in hand with the confidence of having a product that complies with regulations.

Put us to the test!

Nilma
